Will Scott
TEK Construction, Inc.
Bellingham, WA

Subj: WTP Seismic Upgrades Project, CIP 07-5050

Will,

After all has been said and done, I'd like to extend an official "thank you" to TEK Construction for the work completed last summer and fall on Clackamas River Water's treatment plant. The structural upgrades were performed in an efficient and affordable manner by your crews, under the direction of field superintendent Kip Smith, and allowed CRW to maximize grant funds received through the FEMA pre-disaster mitigation program. After 40-plus years of operation, the water treatment plant is now in much better shape to withstand any seismic event, in great part due to TEK's efforts.

Additionally, TEK performed an upgrade to a liquid chlorine treatment system which allowed CRW to de-commission the existing gas chlorine system, offering a safer treatment method for both CRW and the communities it serves.

Throughout construction, under a strict timeline and often demanding work scheduling/coordination, TEK staff were courteous, conscientious, and professional in performing the work and interfacing with CRW staff. I personally enjoyed my daily interactions with Kip, Tim, Jeff, and the entire TEK crew, as we worked together to accomplish this project on time and within budget. Our success in completing the upgrades while CRW maintained continual operations of the treatment plant would not have been possible without each individual involved in the daily prosecution of the work.

I would heartily recommend TEK on any project, and I wish TEK success in its future endeavors!
Thank you,

Adam M. Bjornstedt, P.E.
Engineering Manager, Clackamas River Water
